Legal Name of Host: Google LLC

Internship Location: US- Remote - PA

Internship Location Address: 330 Eldridge Street, Pittsburgh, PA

Telephone Number: (650) 253-0000

Intern Manager's Name: Vaishnavh Nagarajan

Intern Manager's Title: Research Scientist

Intern Manager's Email: vaishnavh@google.com

Terms of Employment

Employment with Google is contingent upon the student signing and agreeing to Google's At-Will Employment, Confidential Information and Invention Assignment Agreement. Internships with Google are "at will", which means that the student or Google may terminate the employment relationship at any time, with or without cause, and with or without notice.

Course Credit & Evaluation

Google internships are intended to provide students with an opportunity to gain real world, practical work experience in a unique and innovative work environment. While some universities offer students the opportunity to earn course credit for participating in an internship, Google internships are not structured academic programs and may not be individually tailored to qualify for course credit.

Internship evaluations may be completed at the discretion of the Google supervisor. Due to the confidential nature of Google's work, supervisors are only able to provide general feedback regarding the student's job performance and are not able to disclose specific information regarding any particular assignment or project.

Students who are required to submit reports or other documentation regarding their internship may not disclose any Google confidential or proprietary information and will be subject to Google's At-Will Employment, Confidential Information and Invention Assignment Agreement. All documentation to be submitted to the student's university or school must be reviewed and approved by their Google supervisor and must not contain any Google confidential information. All requests for external review or publication must be reviewed and approved according to Google's Publication Approval process.

Visa Status | Work Authorization (e.g. CPT, OPT or Academic Training) I Employer Obligations

Typically, students who hold F-1 or J-1 student status must fulfill one academic year (determined by their institution) in order to be eligible for off-campus work authorization. Work authorization is required prior to students engaging in employment. Students need to work closely with their institution's Designated School Official (DSO) or Alternative Responsible Officer (ARO) to determine what options are available to engage in internships. The institution's International Student Advisor is usually the appointed DSO and/or ARO for student immigration matters.

Types of Student Work Authorization
Curricular Practical Training (**CPT**) is a type of work authorization available to F-1 students. CPT may require either course or internship credit and should be related to your field of study. CPT eligibility is determined and authorized directly by the institution's DSO.

Optional Practical Training (**OPT**) is another type of work authorization available to F-1 students. OPT requires an application to USCIS, which can take 3-4 months for processing. OPT instructions can be provided by the institution's DSO.

Academic Training (**AT**) is available to J-1 students. AT should be directly related to the student's field of study. AT eligibility is determined and authorized by the institution's ARO.

Employer Obligations
To the extent possible, Google will comply with any employer obligations under the United States Citizenship and Immigration Services regulations governing Non-immigrant Students and their approved work authorization status.

Internship Job Description:

The Student Researcher Program's primary objective is to foster academic collaborations with students through research at Google. Join us for a paid Student Researcher position that offers the opportunity to work directly with Google research scientists and engineers on research projects.

The Student Researcher Program offers more opportunities for research students to work on critical research projects at Google in a less structured way. The program allows opportunities beyond the limitations of our traditional internship program on aspects such as duration, time commitment, and working location (with options for on-site or remote). The topics student researchers work on tend to be open-ended and exploratory, and don't always have a clear deliverable like a traditional internship would.

Google Research is building the next generation of intelligent systems for all Google products. To achieve this, we're working on projects that utilize the latest computer science techniques developed by skilled software engineers and research scientists. Google Research teams collaborate closely with other teams across Google, maintaining the flexibility and versatility required to adapt projects and foci that meet the demands of the world's fast-paced business needs.
